Lab 1.1 setup

This is less a lab, and more a list of the recommended software for this course

Please contact me if you are having any issues installing the software.

For windows users I recommend (mac and linux users can ignore these):
1. Download cmder from

   https://cmder.net/

   a. Get the full version
   b. Unzip the folder
   c. Open cmder.exe and pin it to your task bar

2. Download notepad++ from (the latest version I fine, 8.2)

   http://notepad-plus-plus.org/

For all OS (Windows, mac and Linux)
3. Download anaconda (python) from

   https://www.anaconda.com/products/individual

   a. MAKE SURE you check the two check boxes
      i. Add to PATH variable
      ii. Make this version your default Python
   b. There is no need to enter your email

4. Download vs code from

   https://code.visualstudio.com/Download

   a. User installer

5. Download git from

   https://git-scm.com/downloads

   a. I would recommend this even if you already have git on your machine, you should have the latest one

6. Create a GitHub account (for free) at

   https://github.com
